About This Guide

This guide provides you the information on how to install and use your VideoMate V150/V150F analog standalone TV box.

VideoMate V150/V150F analog standalone TV box lets you watch TV with your computer monitor without driver or applications install, also the V200F can provide FM radio listening. V150/V150F TV box provide S-video and composite video input which allow you to connect other video devices (i.e. DVD Player, camcorder, XBox360, PS 2, PS 3, Wii or other game console). The maximum resolution is 1440 x900, which allows you to have crystal clear pictures. It also supports 4:3, 5:4, 16:9, and 16:10 screen ratio for all kinds of monitors. With the remote control that included with V150/V150F package will greatly increase the value of the computer monitor which also saves you from buying another TV set.

MINIMUM SYSTEM REQUIREMENTS

- Monitor (CRT or LCD) contains D-sub Connector and supports 640*480 resolution or above.
- Analog TV cable or antenna input

Warning

It is normal for VideoMate V150/V150F TV Box become warm when it is being used. Please place the TV Box at a place where the air flows.

VideoMate V150/V150F TV Box will only need a computer monitor to work; It does not require to connect to computer nor turn on the computer to work properly.

Please do not use other adaptor except the one included in the package to V150/V150F prevent damaging V150/V150F. Damaged V150/V150F by using wrong adaptor will not be cover from the warranty.

Channel Swap

To swap the channel numbers, please select **Channel Swap** from the menu then select YES, and it will show as a sub menu. Once you have entered this menu, you will see a list of channels. You may browse with the direction keys; Up and Down are going through the list while Left and Right are changing

pages of the list. Select the channel number that you wish to swap and press **OK**, and then enter the number of the channel that you wish to switch.

To reset to the original channel numbers, please rescan the channel table again by selecting Auto Scan in the menu.

My Favorite Channel List

My favorite channel list can store up to 10 channels that you watch the most and browse with "Fav. Up" and "Fav. Down" keys on the remote control.

To add channels to the favorite list, please turn to the channel you wish to add and press "**Set Fav**" on the remote control. Press "**OK**" on the selected position.

PIP (Picture In Picture)

You can start PIP function by clicking "PIP" button on the remote control. It allows you to watch TV on the Windows desktop.

When PIP is working, press "PIP" button again will change the size of the TV screen; you may zoom twice and the third time you press "PIP", it will close the PIP function.

The PIP feature can supports up to 1440 x 900 windows' resolution.

Note:

If you need to move the TV screen position on Windows desktop, please press the "**OK**" to switch the keys of channel and volume up/down into direction key, and you can move the PIP TV windows to the place you want.

Channel Surfing

Channel Surfing allows you to preview and find the channel you want by presenting in 9 squares.

To access this function, please press "**Ch.Surf**" button on the remote controller. The pictures will refresh from left to right. When you have found the channel you prefer, please press the correspondent number keys (1~9) to switch to that channel.

OptiRatio

OptiRatio Aspect Selection provides 4:3, 16:9, Panorama, Full Screen, and SmartZoom aspect ratio selections to provide the best TV and video watching on different type monitors.

4:3 Mode: When the 4:3 formats TV/video display on 16:9/16:10 wide-screen monitors, it can keep the 4:3 aspect ratio video and add letter box on both left and right sides.

Original video format 4:3   Add letter box on both
                                         left and right sides of
                                         wide-screen monitors
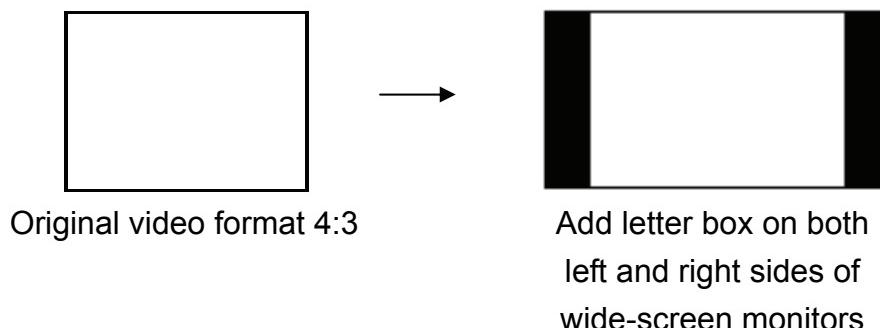

16:9 Mode:

When the 16:9 formats TV/video display on 4:3/5:4 standard monitors, it can keep the 16:9 aspect ratio video and add letter box on both the top and bottom.

Original video format 16:9   Add letter box on both
                                        top and bottom sides
                                        of standard monitors.
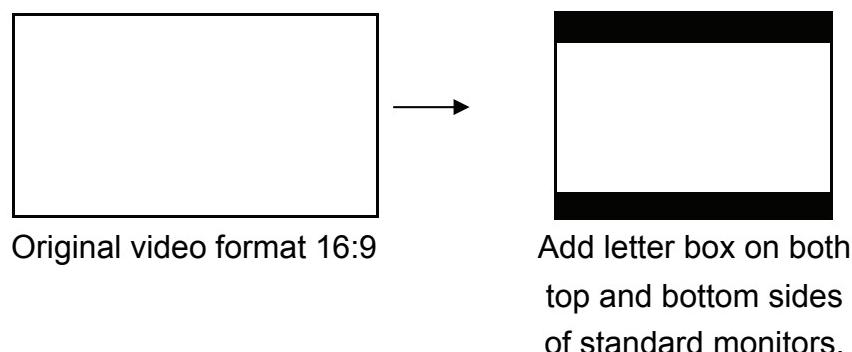

Full Screen Aspect Ratio Mode:

Stretch all the input TV and video to full screen display. But if the original video format is 4:3, it will look a little squash.

Original video format 4:3   Stretch video to fit monitors
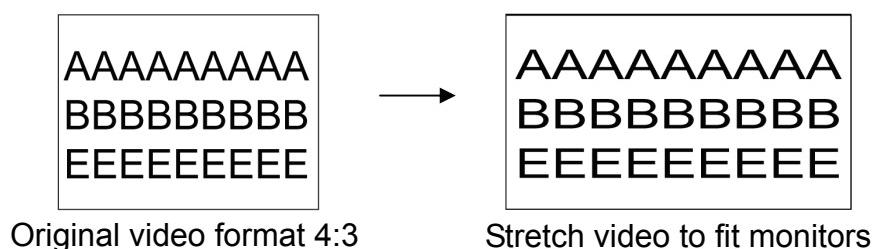

Panorama Mode:

Extend all the input TV and video to full screen display. But the distortion on the center of screen will be less than full screen mode and looks better.

| Original video format 4:3 | Less distortion from center |
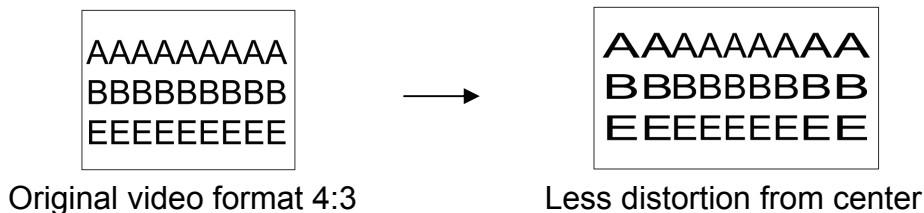

SmartZoom Mode:

When the 16:9 movie broadcast from TV channel, it will add the letter box for 4:3 video format transmit and it looks small on the 16:9/16:10 wide-screen monitors. The SmartZoom mode can remove the letter box on top and bottom to make the movie displays bigger and clearer.

Original video format on 4:3 monitor

Letter box on each sides of video with 16:9 monitor

Removed letter box to display 16:9
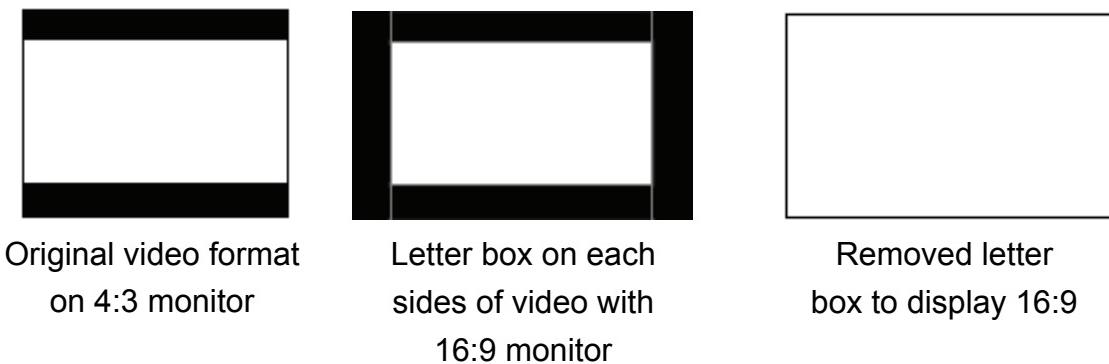

Dynamic Bass Boost

Dynamic Bass Boost is a function that will automatically analyze your audio signal and adjust the volume of the bass. To activate this function, please press the **MENU** button and select **Sound** section, then select **ON** with the option of **Dynamic Bass Boost**. You may refer to the **OSD Menu Guide** above for exact location.

Stereo Effect

Stereo Effect is a function that will simulate stereo sound when your audio input is Mono. When your audio input is stereo, it will enhance the effect and give you a greater feeling of the surrounding effect. To activate this function, please press the **MENU** button and select **Sound** section, then adjust the **volume** of **Stereo Effect** higher for greater effect. You may refer to the **OSD Menu Guide** above for exact location.

SAP Mode (Only appears in PAL/SECAM TV system area)

SAP Mode is a function that will allow you to broadcast Main Audio Channel in the left and Sub Audio Channel in the right. To activate this function, please press the **MENU** button and select **Sound** section, then select **ON** with the option of **SAP Mode**. Switch to the channel that contains both Main and Sub Audio Channel, and then change the stereo mode to SAP by pressing **SAP** button on the remote controller.

Troubleshooting

Installation

The most common cause of the problem is the incorrect connection of the cables. Please refer to "VideoMate V150/V150F TV Box Connection" on proper connection. And also please check the power adaptor already plugged.

Warning

It is normal for VideoMate V150/V150F TV box become warm when it is being used. Please place the TV Box at a place where the air flows.

Please do not use other adaptor except the one included in the package to prevent damaging V150/V150F. Damaged V150/V150F by using wrong adaptor will not be cover from the warranty.

No Picture

Please make sure you have properly connected the TV cable to TV Box in order to watch live TV. It might also because the input source of V150/V150F TV Box is not set to TV mode, please switch the video input source to TV.

How to add the missing channel?

If there are some channels missing after Auto Scan, you can add the missing channel to channel table by yourself from the steps below:

1. Please directly key-in the missing channel number by remote number pad.
2. Press "Menu" key to open the OSD menu.
3. Select the "TV" setting tab (the second from left).
4. Select "CH Add/Erase", and then pick "Yes" to add channel.
5. Now you can watch the missing channel.

TV picture is not clear?

TV signal could be reduced by the branching. Please make sure the cable signal is good. Try to move the computer to a TV set and connect the cable which is being used for the TV set. Also directly connecting the cable before the splitter may help. This problem could also come from with static. Once you connect the cable to our TV card, the static interfere the system. It's possible to correct this problem by connecting a wire from the grounding of the cable to ground. Also make sure computer grounding is good.

Why PIP does not work?

Please make sure you have connected your computer VGA to V150/V150F and connect V150/V150F to the monitor. For more information, please refer to the TV box connection description.

If your display card of your computer has both DVI and VGA connected, please make sure the settings in Windows is set to VGA output.

Please also check if your desktop resolution is one of our supported resolutions. Please refer to the detail list of resolutions.
